Summary

- Frontend Engineer with ~6 years of experience building scalable, accessible UI components and web applications. Currently at PayPal working on an enterprise Design System used by **170+ internal teams** company-wide — driving component API design and frontend architecture decisions for scalability. Strong expertise in **React**, **TypeScript**, and modern frontend tooling including Vite, Webpack, and Storybook.

Experience

PayPal

Nov 2023 – Present

Software Engineer 2 – Frontend

Bengaluru, India

- Contributed to and maintained a library of **70+ reusable React components** built with **React**, **TypeScript**, and **vanilla-extract** for PayPal's internal Design System used by **170+ internal teams** — ensuring cross-browser compatibility, multilingual support via PayPal's internal localisation API, and consistent behaviour across devices.
- Regularly collaborated with design, accessibility, and motion experts to review new component additions, and conducted PR reviews to uphold code quality, accessibility, and design consistency across the library.
- Contributed to component API design decisions, defining prop interfaces and event contracts to ensure components are intuitive and easy to consume across teams.
- Introduced **compound component architecture** to components including Modal, Dialog, Card, and Accordion — enabling scalability and custom UI support for consuming teams while maintaining full backward compatibility with existing APIs.
- Contributed to reducing build times by **70%** by migrating the build tool to **Vite**, improving developer experience across the team.
- Set up Lerna for monorepo versioning and semantic release management, configured Prettier and ESLint across the codebase, and added a Sonar stage for quality gate analysis in the existing CI setup to enforce consistent code quality standards.
- Built a **Live Edit Plugin for Storybook**, enabling engineers to test and validate components in real time without leaving the docs.
- Authored Storybook stories and component documentation, and added tracking capability to the documentation site to capture user and component visits — helping the team see which components are most used and where to focus improvements.
- Added capability to the design system's **MCP server** to detect when a newer component library version is available, allowing downstream teams to review required changes based on the changelog.
- Built a skill flow that automates committing changes, raising PRs, generating stage links, and notifying reviewers on Slack for all feature, bug fix, and release PRs — reducing developer friction across the entire development workflow.
- Developed a **test generator agent** that identifies gaps in test coverage and adds meaningful tests, increasing coverage from **71% to 90%** within two days — receiving recognition from the team for the impact.
- Improved component quality through performance optimisations (code-splitting, lazy loading, caching) and contributed to increasing snapshot test coverage by **25%**, improving release stability.
- Unblocked major integration releases by resolving critical component and live production issues within tight timeframes, receiving recognition from dependent teams for timely support.
- Upgraded from imask to react-imask, eliminating manual DOM handling and reducing unnecessary complexity in input masking across components.

Publicis Sapient

Oct 2021 – Nov 2023

Associate Technology L2 – Frontend

Mumbai, India

- Built the **end-to-end frontend** for a customer-facing Loyalty Program Journey — enabling users to link or join third-party loyalty cards to their bank payment card — delivered from scratch to production with direct client recognition.
- Part of the team that led the frontend migration of a legacy Business Payments platform to a modern React stack; extracted reusable components, restructured routing with React Router, and implemented Redux for state management.
- Developed and tested UI components using React.js, Jest, and React Testing Library, and set up project structure and build pipeline with Webpack across both projects.
- Worked with backend and design teams to align on Swagger/OpenAPI contracts and authored API mapping documentation for the team.

- Identified and resolved UI performance and design consistency issues through code and design reviews across sprint cycles.

Xoriant Solutions

Nov 2020 – Oct 2021

Associate Software Engineer – Frontend

Pune, India

- Developed frontend modules for an investment analytics platform — including User Dashboard, Portfolio Creation Board, and Best Performing Portfolios Board — using React.js.
- Built data visualisation features using a chart library to display portfolio performance, and handled REST API integration for fetching and mapping financial data to the UI.

Technical Skills

- **AI Tools:** Claude Code, MCP (Model Context Protocol)
- **Core:** React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3
- **State & Styling:** Redux, vanilla-extract
- **Build & Tooling:** Webpack, Vite, Rollup, Babel, Storybook, Lerna
- **Testing:** Jest, React Testing Library
- **Backend:** Node.js, Express
- **Other:** a11y, i18n/l10n, Design Tokens, Performance Optimization, ESLint, Prettier

Education

R. C. Patel Institute Of Technology

Aug 2016 – Jun 2020

B.E., Computer Science and Engineering (CGPA: 7.79)

Maharashtra, India
